

# Partfinder Extension User Guide

## About This Extension:

Let customers find the right products easily. Most products have just a few key characteristics, to which customers pay most attention. So it is very important in Magento to make advanced search by the key parameters as easy as possible.

## Features:

- If you are the owner of a Magento auto parts store, it should be easy to choose year of production, car make and model.
- If you sell phone batteries, it should be easy to search them by phone manufacturer, model or capacity.
- This is a standard feature for stores, which sell parts and customers are used to it, so without this functionality your site will be a lot less user friendly.

In addition the product finders work well both with standard Magento layered navigation and with our Improved Navigation, only the product finder's work a lot faster.

## Installation:

Steps to install this extension

**We recommend creating a backup of your site before installing any new extension, especially if it is a live site**

- Please make sure you've downloaded extension package compliant with your magento version. The Compliance information is stated in the package filename. Once you've downloaded and unzipped the archive.
- Upload the contents of the module package to the **Magento root folder**. This will not overwrite the existing Magento folders or files, only the new contents will be added.

Magento root folder directory structure looks like, <http://www.techflirt.com/tutorials/magento-tutorial/magento-directory-structure-files.html>

- After uploading is done, Log in your Magento administration panel to refresh cache by way go to **System > Cache Management**. Select all caches and take action “**Refresh**” then submit.
- You can check whether the module is enabled or not in Admin area. Go to **System > Configuration**, under configuration select “Advanced” >If the Module is Enabled You can see option “Enable” for “Mg\_Partfinder”.

## **UnInstallation:**

In Admin area, go to **System > Configuration**, under Configuration select “Advanced” >Click on Disable Modules Output and select “Disable” for “Mg\_Partfinder” and click **Save Config** button Clear the store cache under **System > Cache Management**.
